

How to Put in Eyedrops

1. Tilt your head back, and gently pull your lower eyelid down to form a pouch. Hold the dropper directly above your eye, look up, and squeeze a drop of the medicine into the pouch. Do not let the tip of the dropper touch your eye or any other surface.

2. Close your eye for a minute or two and with a fingertip press gently on the inside corner of your eye to keep the medicine from draining out. Do not rub your eyes.
