

## Children's Vision Chart

The symbols on this page can be used in place of letters to test your child's vision. For an accurate examination it is important that your child be familiar with the symbols. Practice naming the symbols with your child prior to the examination. Do not worry about covering one eye or the other and do not worry about how closely your child needs to view the symbol to name it. The exact name your child uses is not important; simply make sure that your child is confident about naming the symbols. Avoid using the word "test" and remember, there are no wrong answers!
