

Diaper Rash or Genital, Perianal Rash Treatment

1. After each bowel movement or urination, wash area with lukewarm tap water and dry with clean cotton towel. Do not use diaper wipes on baby's skin if baby has active dermatitis.
2. Apply Zinc Oxide paste in a thick layer to baby's bottom. This is found in over the counter Diaper rash creams. Pick the brand with the highest percentage of Zinc Oxide listed under ingredients.
3. If medication is needed, apply medicated cream as recommended by your provider and then a layer of Zinc Oxide paste.
